Name : Ahmed Rabie Mohamed

Project 2 – Exploratory Data Analysis (EDA)

Objective

The objective of this project is to analyze the dataset and discover patterns, trends, and insights using Exploratory Data Analysis (EDA) techniques.

Tasks Performed

1. Pivot Table Analysis

- Created Pivot Tables to analyze product sales and order counts.
- Compared products based on total unit price and number of orders.

Row Labels	Sum of UnitPrice	Count of OrderID
Chair	63307.53	178
Desk	56033.38	170
Laptop	61883.32	173
Monitor	58462.17	163
Phone	58533.94	156
Printer	63660.40	181
Tablet	65814.56	179
Grand Total	427695.30	1200

2. Data Visualization

- Generated charts to visualize product performance and sales distribution.
- Used charts to better understand trends and comparisons between products.

3. Statistical Analysis

Calculated basic statistical measures including:

- **Mean**
- **Median**
- **Maximum Value**
- **Minimum Value**

Statistics	value
Mean	1053.97
Median	823.62
MAX	3456.40
MIN	11.39

Statistics

The following screenshot represents the complete Exploratory Data Analysis process, including Pivot Tables, Charts, and Statistical Analysis performed using Microsoft Excel

4. Key Insights

- **Tablet generated the highest total unit price.**
- **Desk recorded the lowest sales value.**
- **Product sales are relatively balanced across categories.**
- **The average unit price is 1053.97.**

Tools Used

- **Microsoft Excel**

Final Result

The dataset was analyzed successfully using Pivot Tables, Charts, and Statistical Analysis techniques. The project helped identify important trends and insights from the data.

Conclusion

This project improved my understanding of Exploratory Data Analysis (EDA) using Excel. I learned how to summarize data, visualize trends, and extract meaningful insights from datasets.
